Design-Expert 12.0.3 Crack Category:Statistical softwareQ: Start database seeds I'm a newbie with RoR (I'm used to just using
Django), and I have a question. How can I use the seed directory to seed a database? I'm trying to do a so: \$ rails g model
PageName:string \$ rails g model Title:string \$ rails g model AuthorName:string \$ rails g model Content:string \$ rails g model
PageCategory:string \$ rails g model Comment:string I'm finding it hard to find a way to use the seeds to build these tables. In
Django, I would just put a file with the following: Article , PageName: StringField() , Title: StringField() , AuthorName:
StringField() , Content: StringField() , PageCategory: StringField() , Comment: StringField() and make sure that I would add
this new file to my database.yml file, which would look something like this: # Uncomment the following line if using
PostgreSQL 8.4 or above # database: myapp_development # encoding: unicode # encoding: utf8 # Mapping for: en default
